ONTARIO WATER RESOURCES COMMISSION
OFFICE OF THE GENERAL MANAGER

Members of the Elora Local Advisory Committee,
Village of Elora.

Gentlemen:

We are happy to present you with the 1967 Operating Summary for the
Elora Water Pollution Control Plant, OWRC Project No. 2-0125-62.

Your co-operation with our staff throughout the year has been appreciated.
Only with such co-operation can the war against water pollution be waged
effectively.

Yours very truly,

A handwritten signature in dark ink, appearing to read "D. S. Caverly".

D. S. Caverly,
General Manager.

GENERAL MANAGER
W. S. MACDONNELL
COMMISSION SECRETARY

General Manager,
Ontario Water Resources Commission.

Dear Sir:

I am pleased to submit to you the 1967 Operating Summary for the Elora Water Pollution Control Plant, OWRC Project No. 2-0125-62.

The summary reviews progress during the year, outlines operating problems encountered and summarizes in graphs, charts and tables all significant flow and cost data.

Yours very truly,

A handwritten signature in cursive script, reading "D. A. McTavish".

D. A. McTavish, P. Eng.,
Director,
Division of Plant Operations.

FOREWORD

● This operating summary has been prepared in order to acquaint readers with the management of the project during 1967. The efficiency of the plant's operation is reflected in a general review. Significant financial details are recorded, and technical performance is illustrated by graphs and charts.

The summary should answer two salient questions. Are the project's facilities adequate at this time? And can the project meet future requirements?

The Regional Operations Engineer is primarily responsible for the preparation of the report, and will be pleased to answer any questions regarding it.

Most of the material for the graphs and charts was compiled by the statistics section of the Division of Plant Operations, with the final versions of the graphs being drawn by the draughting section of the Division of Sanitary Engineering. Cost data were provided by the Division of Finance.

It will be evident from the report that all of these groups co-operated with substantial success.

'67 **REVIEW**

A total of 23,573 million gallons of sewage was treated during the year at a cost of \$6,770.25. This represents a 30 percent increase over the year as compared to the 18,142 million gallons of sewage treated in 1966. The cost per lb. of BOD removed in 1967 was \$0.12 compared to \$0.16 in 1966.

The average BOD and suspended solids in the raw sewage were 240 ppm and 447 ppm respectively. The water pollution control plant reduced the BOD and suspended solids concentration on an average with 95 percent and 97 percent efficiencies respectively. The average suspended solids concentration in the effluent of 14 ppm was below the OWRC objective of 15 ppm. Although the average effluent BOD concentration was 19.5 ppm, the average BOD in the effluent from June to December inclusive was 7 ppm which was well below the OWRC objective of 15 ppm.

In June 1967, the Sparjer coarse bubble diffusers were replaced under warranty with "Filtros" fine bubble diffusers.

During the year, both the Elora and Fergus Water Pollution Control Plants were operated by plant staff stationed at the Fergus Water Pollution Control Plant. Under the supervision of head office engineers, the plant staff operated a clean, attractive and efficient plant for the Village of Elora.

Process Data

The average daily flow for 1967 was 64,600 gpd. This represents 78 percent of the design average daily flow of 83,300 gpd. During the past year, 23.573 million gallons of raw sewage composed of both domestic and industrial wastes received complete treatment.

The maximum total daily flow averaged by month was 90,600 gallons and occurred in April. The average daily flow of 64,600 gallons was exceeded during the months of January, February, April, July and December. The design daily flow of 83,300 gallons was exceeded 29 percent of the time.

COMMENTS

The average raw sewage BOD concentration of 240 ppm was 114 percent of the design concentration of 210 ppm and the raw sewage suspended solids concentration of 447 ppm was 179 percent of the design value of 250 ppm.

The average effluent suspended solids concentration of 14 ppm was below the OWRC objective of 15 ppm. However, the average effluent BOD concentration of 20 ppm exceeded the OWRC objective of 15 ppm. The water pollution control plant produced a poor effluent during the months of March, April and May. However, it should be noted that from June to December inclusive, the average effluent BOD was 7 ppm which is well below the OWRC objective of 15 ppm.

An average reduction of 92 percent and 95 percent for BOD and suspended solids respectively indicates that the plant provided very good treatment during the year.

DECEMBER	720	3403	18	557
TOTAL	-	-	-	-
AVERAGE	240	5412	10	3727

* Raw BOD no prim.

COMMENTS

Except for the month of December, the average aeration tank loading was 3 lbs. of BOD per 100 lbs. MLSS which is in the recommended range of loadings for an extended aeration process. The aeration section of an extended aeration process will usually operate very well within a ratio of one to five lbs. of BOD per 100 lbs. of MLSS.

The average raw sewage BOD of 720 ppm during the month of December indicated a very strong sewage during this month. The water pollution control plant treated this sewage with no difficulty producing an effluent with an average BOD of 7 ppm.

CHLORINATION

MONTH	PLANT FLOW (MG)	POUNDS CHLORINE	DOSAGE RATE (PPM)
JANUARY	2.606	198	7.6
FEBRUARY	2.492	104	4.2
MARCH	1.652	134	8.1
APRIL	2.715	108	4.0
MAY	1.768	95	5.4
JUNE	1.879	81	4.3
JULY	2.446	86	3.8
AUGUST	1.656	100	6.0
SEPTEMBER	1.387	80	5.8
OCTOBER	1.536	74	4.8
NOVEMBER	1.074	81	7.5
DECEMBER	2.362	98	4.2
TOTAL	23.573	1239	-
AVERAGE	1.964	103	5.5

COMMENTS

The average chlorine dosage rate during the year was 5.5 ppm. Chlorine is used to disinfect the effluent. Chlorine was also used during the year on occasion to pre-chlorinate the return sludge in order to improve the settling ability of the MLSS.

CONCLUSIONS

The plant provided good treatment during the year producing an effluent with an average BOD of 19.5 ppm and suspended solids of 14 ppm. From June to December inclusive, the plant produced an effluent with an average BOD of 7 ppm.

The present arrangement utilizing the OWRC staff at the Fergus Water Pollution Control Plant to operate both the Fergus and Elora Water Pollution Control Plants proved successful and economical during the year.

RECOMMENDATIONS

Since the staff requirement at the plant still remains less than one operator, it is recommended that the present arrangement of staffing at the water pollution control plant be continued.
